Building Dashboards

Identifying needs and aligning with data, presentation and interactivity

Dr. Zsanett Bahor

Data Analyst and Dashboard Developer @ UBDC

Why dashboards?

- Dashboards have become a **standard tool** over the last decade in many sectors for communicating data and insights
- Useful in **communicating data effectively**, highlighting important information, starting guided conversations, driving action
- Poorly designed dashboards **fail to engage users, convey insights and make data less comprehensible**

User contexts, motivations & needs

Identify your target audience and their needs

Dashboards can have multiple audiences and they will want different levels of detail

- Who **are they**?
- What is their **role**?
- What do they **already** know?
- What do they **need** to know?

High level
overview of
performance

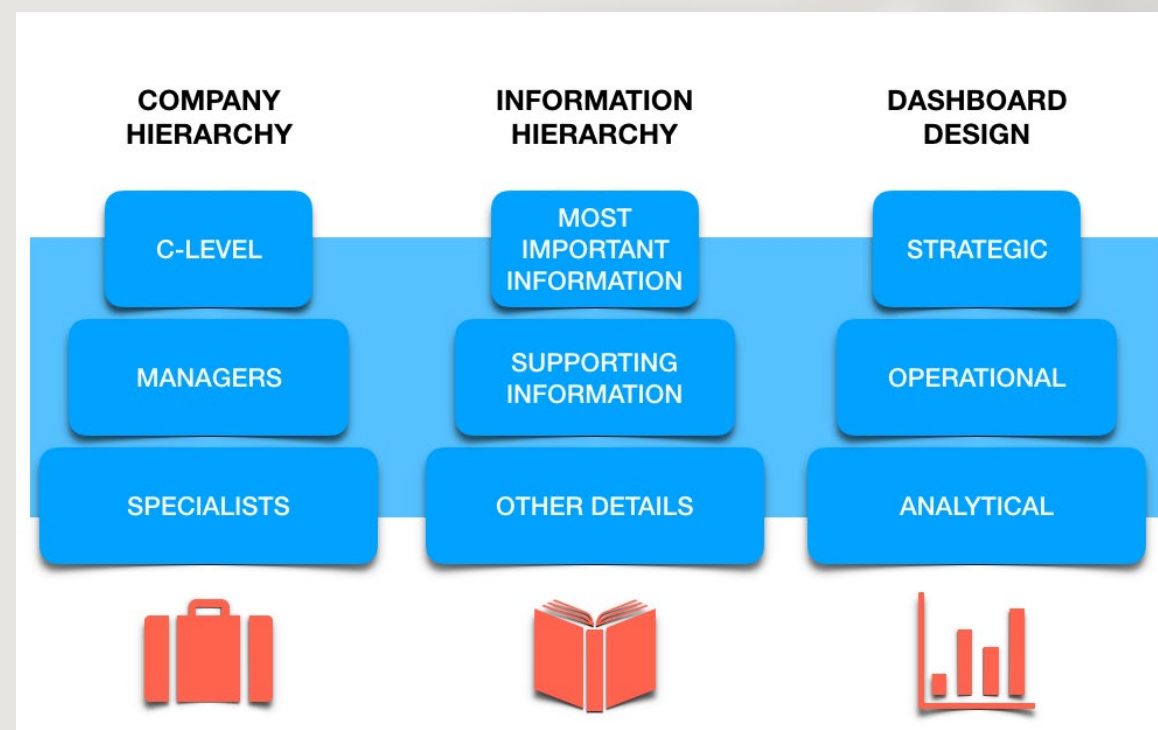

Drill down into data
and explore historical
data trends

Monitor specific
indicators in real-
time

Creating purpose-led designs

- **Purpose will inform design**, so need to be clear about what you're trying to achieve:
 - See the big picture
 - Focus on specific metrics or information that are of interest to users
 - Deep dive into the information to see what action needs to be taken
- Consider **what value it will be adding?**
- Consider **how end-users will use dashboard**: Prescriptive/Explanatory or Exploratory?

Aligning needs with available datasets

Select the indicators that meet identified needs

- Only include what's important and support the board's intent

Choose data that:

- Translate into meaningful information
- Fit end-user needs
- Fit purpose of dashboard

Some key data considerations

- **When deciding on data sources, consider:**

- Availability
- Granularity
- Quality - i.e. completeness, accuracy
- Timeliness/Continuity

- **Be careful of:**

- Data privacy
- Data licensing

Case study:

Glasgow City Region Economic Dashboard

- **Audience:** Local authorities within the Glasgow City Region and other economic actors
- **Purpose:** Delivering a demonstrator dashboard that provides insights on economic activity at city region level and meets local policy and operational needs.
- **Data:** Given a dataset in advance collated from openly shared data
- **Specific Needs:**
 - Overview at the level of local authorities within Glasgow City Region, comparisons between each other and across different city regions within the UK
 - Simple interface/ user-friendly
 - Be able to create reports or export visualisations

GLASGOW CITY REGION ECONOMIC DASHBOARD

 [Single Local Authority Summary](#)

 [Compare Glasgow City Region Local Authorities](#)

 [Compare UK City Regions](#)

 [About](#)

Welcome to the Glasgow City Region Tool

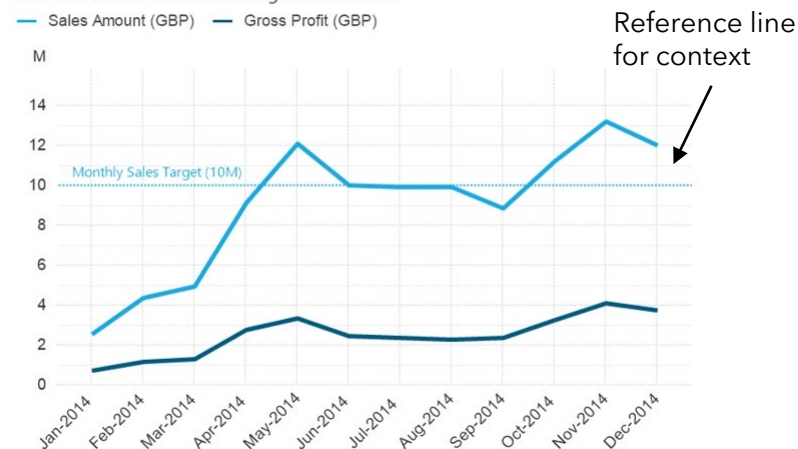

Please select an area on the map to get overall statistics for that area

Leaflet

Make design straightforward

- **Ensure information being shown is clear** – most relevant information should be clear at a glance (i.e. make it simple and use context if required)

How Have Sales & Profit Changed Over Time?

Make design straightforward

- **Ensure information being shown is clear**
- **Make dashboard user friendly and avoid clutter** to avoid detracting from what's important (use interactivity)

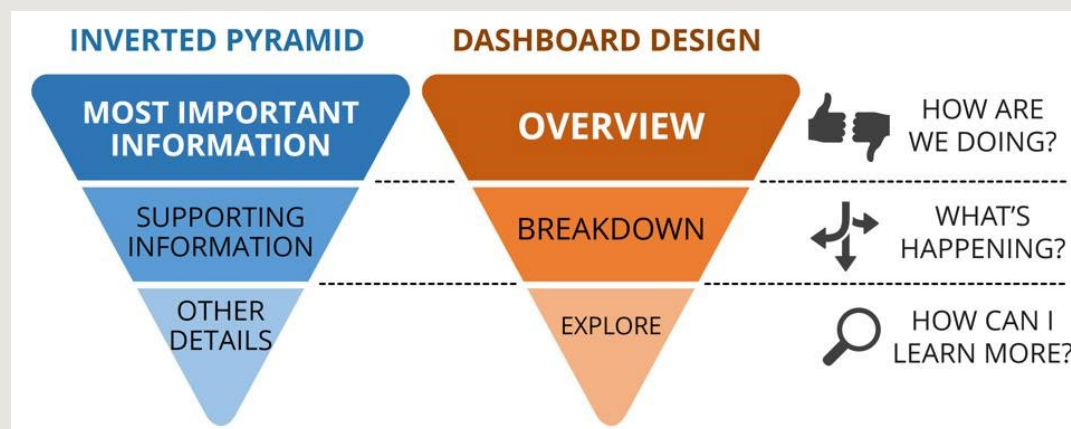

Make design straightforward

- **Ensure information being shown is clear**
- **Make dashboard user friendly and avoid clutter**
- **Use good visual organisation** to make it clear to the viewer what's most important (use size, position, grouping to show hierarchy)

Make design straightforward

- **Ensure information being shown is clear**
- **Make dashboard user friendly and avoid clutter**
- **Use good visual organisation**
- **Use the right type of chart** to aid understanding

Make design straightforward

- **Ensure information being shown is clear**
- **Make dashboard user friendly and avoid clutter**
- **Use good visual organisation**
- **Use the right type of chart**
- **Keep design clean and consistent**, use colours sparingly, but think about accessibility

Picking the right tool

- **Lots of great data visualisation tools out there...**
- Some things to consider when choosing:
 - Cost
 - Level of expertise required for creation/maintenance
 - Ability to have key features (i.e. downloadable reports)
 - Accessibility through other devices/offline viewing
 - User preference and familiarity

VISBROWSER ADD A TOOL ABOUT

AVAILABILITY	PROGRAMMING SKILLS	PLATFORM	FEATURES	TYPE OF DATA	VISUALIZATION
34 Free	23 None	17 Apple	23 Web-publishing	33 Numeric	45 Maps
28 Open source	11 Javascript	20 Windows	26 File exports	25 Geographic	32 Basic charts
18 Paid	6 Python	12 Linux	10 Other	29 Temporal	17 Advanced charts
	2 Java	22 Web	11 Wizard	12 Text	16 Other
	10 Other	8 Library	9 PDF Export	18 Other	16 Storytelling

COLORBREWER
https://colorbrewer2.org/
Intended for use as a diagnostic tool for evaluating the robustness of individual colour schemes.

DATA ILLUSTRATOR
http://data-illustrator.com/
Create infographics and data visualizations without programming.

CHARTICULATOR
https://charticulator.com/index.html
Allows you to create bespoke chart designs without the need for any programming.

Future proofing your app

- Consider how users will **engage with your dashboard** long term
- Who will **maintain & manage the solution** after deployment?
 - How frequently does the data need to be updated?
 - Does it need to connect to live data sources?
 - Version updates?

Keep evolving your dashboards!

Purpose

What are their
needs/requirements?

Access

How to make sure
message is accessible
and clear to all?

Ease

How can we make it
easy for them?
